

Press Release

College Station Pond

August 6, 2013

Marine Biochemists have applied another algaecide treatment to the pond on Tuesday, August 6, 2013. No water use restrictions apply with this application. Parks maintenance staff will continue to remove the treated milfoil floating on the pond's surface as resources and schedules permit. The park district and Marine Biochemists will continue to monitor the pond's condition to determine if any more treatments are necessary this year. Please contact Jeff Nehila at the park district at (847) 223-7529 or jnehila@glpd.com if you have any questions.
