

May 18, 2015

Dear Resident:

On May 27, 2015, Marine Biochemists will apply an entire pond volume treatment to Molly's Pond. The treatment is intended to selectively eradicate exotic milfoil and curly leaf pondweed, while preserving the native plant species within the pond. The rain date will be May 28, 2015.

THE WATER USE RESTRICTION in effect following the treatment will be thirty (30) days for irrigation.

Weather and/or high water levels may postpone the treatment. Marine Biochemists will notify the Grayslake Community Park District in the event of postponement. Should you need additional information or would like confirmation that the treatment did occur on May 27, please contact Jeff Nehila at the Park District at (847) 223-7529.

Other applications this year: The Pond is periodically treated for algae throughout the summer and early fall. No restrictions apply for these treatments.
